

ID LICENSE SCANNER

\$199 + \$9.95/mo. (+ applicable taxes)

This **Premium Feature** can improve enforcement of age verification controlled products, with provable statistics to be in compliance with age verification laws. Products requiring age verification can be verified by scanning a driver's license. This **Premium Feature** requires the purchase of an NRS enhanced scanner (\$199 + tax), which is configured to capture data from license and other ID cards that bear 2D barcodes. It additionally requires a **monthly subscription** (\$9.95/mo. + applicable tax)

When an age verification required item is entered at the register the verification dialog will appear with a prompt to scan the customer's license.

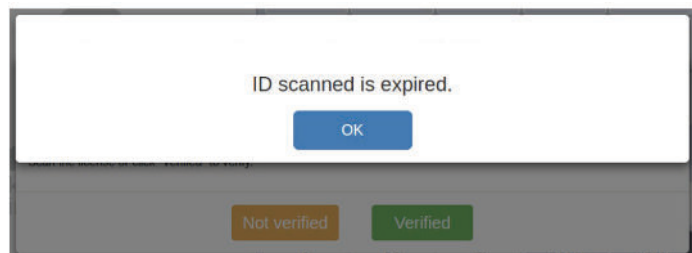

Scan the 2D barcode on the back of the license.

Note: Some licenses may have a standard barcode in addition to the ID barcode. The enhanced scanner can be precisely aimed to only capture the ID barcode. If the standard barcode is scanned, verification will fail until the ID barcode is scanned.

If the license is expired, the following message will appear.

A valid license will place the item in the basket.

Manual verification is possible by clicking the **Verified** button.
