

LICENSE ID SCANNING

This subscription feature requires the purchase of an enhanced License ID Scanner
NRS DOES NOT PROVIDE SUPPORT FOR ANY OTHER THIRD PARTY ID SCANNERS.

Products requiring age verification can be verified by scanning a driver's license. This premium feature requires the purchase of an enhanced scanner capable of capturing data from license 2D barcodes.

When an age verification required item is entered at the register the verification dialog will appear with a prompt to scan the customer's license.

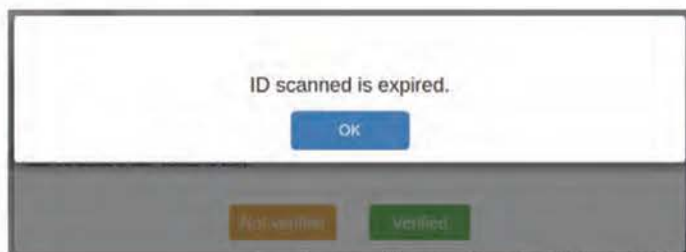

Scan the 2D barcode on the back of the license.

Note: Some licenses may have a standard barcode in addition to the ID barcode. The enhanced scanner can be precisely aimed to only capture the ID barcode. If the standard barcode is scanned, verification will fail until the ID barcode is scanned.

If the license is expired, the following message will appear.
