

SELF-ORDERING

KIOSK

Powered by NRS

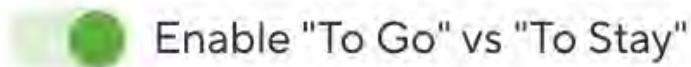

RELEASE NOTES: 1.1.75

The following new features were deployed to your Kiosk during our most recent software release:

(1) Enable “To Go” vs “To Stay”

To assist with packing orders correctly, you may now ask your customers if they want their order “To Go” or “To Stay”.

To enable this option, go to the “Kiosk” settings tab and turn this toggle on:

Once you enable this toggle, your customers can choose between “To Go” and “To Stay” on your Kiosk:

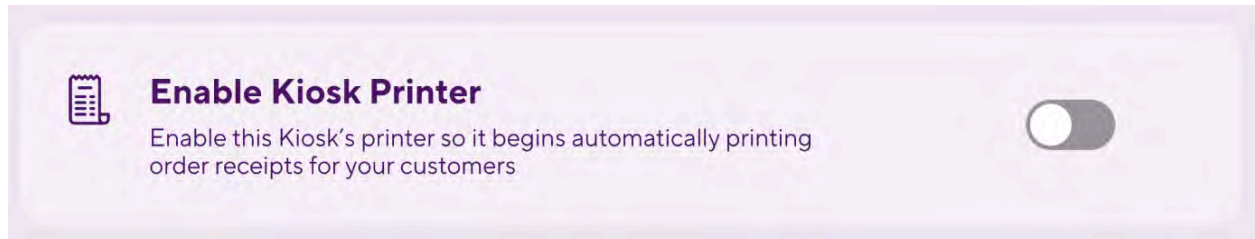

If you have a Remote IP Printer connected to your Kiosk for automatic printing in your kitchen, the picking slips will now show whether the order is “To Go” or “To Stay”.

(2) Enable Receipt Printing

Your Kiosk can now print receipts for your customers.

If you want the Kiosk to print receipts:

1. Fill the Kiosk printer with receipt paper ([Order more paper on NRS Market](#))
2. Go to “Enable Kiosk Printer” on the Kiosk’s System Configuration page and turn on the toggle.

Your Kiosk will now print receipts for the customer for every order.

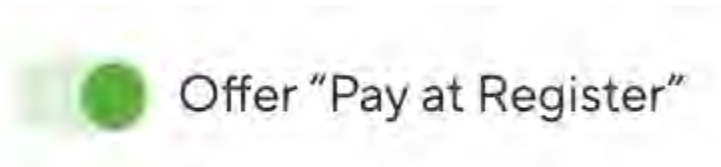

LAST RELEASE: 1.1.25

The following new features were deployed to your Kiosk during the last software release.

(3) Remove "Pay at register" option

You can now remove the option for Kiosk shoppers to “Pay at Register”. Removing this option will force all Kiosk shoppers to pay at the Kiosk PAX machine via credit card.

To disable Pay at Register, go to the “Kiosk” settings tab and turn off the “Enable Pay at Register” toggle. The “Or pay at register” payment option will no longer appear during Kiosk checkout.

(4) Make “Phone Number” Optional During Checkout

Phone number is required by default so that shoppers can earn loyalty (if your store has the Advanced plan), and receive text messages with their Kiosk order numbers. However, some merchants have said that they do not want to force their shoppers to provide a phone number.

You can now make it optional for customers to provide their phone number during the Kiosk checkout process by turning off this toggle on the Kiosk settings page:

Require Customer's Phone Number

(5) Enable Automatic Printing

You can now automatically print Kiosk orders on your Remote IP Printers (AKA “Kitchen Printer”).

To select a printer for automatic printing, you must first connect your IP Printer via Ethernet to the same ethernet switch that is used for the store’s POS and Kiosk.

- If you do not have an IP Printer yet you can [purchase one here](#).

Next, go to the “Kiosk Configuration” page on the Kiosk and tap “Select Printers” in the “Automatic Printing” section. Then choose the desired printers from the list provided and click OK. You may remove a printer from the list by clicking X next to its name.
