

1.0.47 Summary Release Notes

What's New

- **Scan key-fob for instant customer sign-in**
Cashiers can now scan the barcode on a customer's key-fob (or use the terminal camera) to auto-populate the phone-number field and complete sign-in.
- **Optional SMS bypass for loyalty redemptions**
A new settings toggle lets stores skip the SMS verification step during "app-less" loyalty redemptions. This is ideal for sites with poor reception and helps reduce failed redemptions.
- **Dedicated Loyalty Performance report**
Adds a full Loyalty report that shows redeemed-value totals with a trend graph, a points-status indicator, and counts of active clubs and redeemable products, giving managers actionable insights direct from the POS.
- **Export data from Sales reports**
Each Sales report card now features a Share menu: tabular views export to CSV; graphs export to PNG.
- **Warning on high-value transactions**
A new register setting, enabled by default at a \$1000 threshold, prompts for confirmation whenever a basket exceeds the high-value transaction limit, preventing accidental large sales and flagging suspicious activity.
- **Show full dates on report summary cards**
Report tiles in the *Reports* home screen now display the **complete start–end range** (e.g. "1 May, 1 am – 31 May 2025, 1am") and the **exact time the data was last refreshed**.
- **Enhanced auto-batching process**
Panther's automatic batching has been rebuilt to be fault-tolerant and informative. New features include:
 - Configurable cut-off time per store.
 - Automatic retries for late-arriving transactions.
 - Clear "Batch in progress / Complete" badges in *Back Office* → *Payments*.
 - A single consolidated batch-close receipt printed (or emailed) to owners.
