

NRS POS Release Notes

January 2026

Food Service Printing Enhancements:

Printing support for food service businesses has been improved by triggering all Kitchen Printing from the Print Basket option on the Food Service popup. IP printers produce Kitchen Tickets while USB Printers produce full receipts.

Receipt Format Enhancement:

To comply with Canadian government regulations, there is a new switch for by weight line items called Show Price/Unit that affects how they appear on baskets/receipts. Beside the default price format, the following format will also be possible to use - and required for Canadians: "[number] lb @ \$[dollar amount]/lb".
