

POS Update Release Notes

May 2026

Changes to Cash Discount Handling of Price-Embedded UPCs Printed from Non-Integrated Scales

The price on a label printed from a printing scale **must** be the **List Price** when **Cash Discount** is on in order to comply with card brands, such as Visa. A toggle was added to control which price is used when a price-embedded label is scanned on the **POS** to give merchants time to transition their printing scales to using **List Price**.

Auto Close Option for Paid at Kiosk Orders

Customers no longer need to interact with the **POS** or **Order Management System** to pick and close orders which were **paid for** on the **Kiosk**. These orders automatically print to the kitchen and will be closed by system.

Receipt Footer Tab

Only the administrator can now see the **Receipt Footer** tab on the **Tools** → **Store Setup** page that allows changing the receipt footer. This means that no other user can change it.
