POS Release Notes

Nightshade .1

November 2026

Kiosk Receipts Barcode Scan Lookup

Order Processing for the **Kiosk** is streamlined by adding a barcode to the bottom of **Guest Receipt.** Scanning this barcode on the **POS** pulls the order down into the **Register** for payment. This avoids needing to go into the **Order Management System** to finalize these orders.

Register Receipts Barcode Scan Lookup

Scanning the barcode on the receipt will open a previous transaction in the **Register**.

Variable Bottle Deposit (CRV Support)

A new **Apply CRV** switch has been added to stores, departments, and products, to flag California Redemption Value (CRV) eligibility and automatically apply the fees based on product container size in order to allow easy compliance with California law.

SMS Receipt Update

SMS Reciepts have been updated to reflect all the same information that goes out on the printed receipt.

Profit Margin Added to Pricebook

The profit margin now appears in the main **Pricebook** page.

Edit Loyalty Balance

The **Edit Loyalty Point** Adjuster Panel can now adjust point numbers manually without having to click the arrows. In addition a mandatory text field has been added to explain the reason for manually editing the Loyalty Balance when the reason selected is **Other**.

Preventing Duplicate Departments

Departments with duplicate names can no longer be created on the **Merchant Portal**. When creating a new department with a duplicate name, an error message now appears warning that the name is already in use.

Hiding Cash Discount Report

Cash Discount Report will be completely hidden in the following circumstances:

- If **POS** batching is **off** (set to be done from the **PAX** device**)**.
- If the store does not have the **Cash Discount** License.

Contact My Customers

- The **Contact My Customers** side bar button is now visible and enabled for **Loyalty License** users without the **Contact My Customers License**.
- Scheduled campaign dates in **Contact My Customers** will remain as they were drafted, not shifting a day from draft to publishing.

Showing Modifier Prices

Modifier prices are now displayed in **Manage Orders** and **Order History**.
